THE USI DIGITAL BADGE

Industry Certifications

USI Industry Certifications confirm that recognized aviation best practices for Remotely Piloted Aircraft Systems (RPAS) knowledge and actual flight competency have been earned. USI certification tests are professionally proctored or observed creating verified and validated outcomes. USI certifications are issued and managed digitally via Credly® and are subject to renewal requirements. These certifications are designed to provide verified and standardized designations in academic, commercial, and other professional RPAS applications at varying levels of operational complexity and risk.

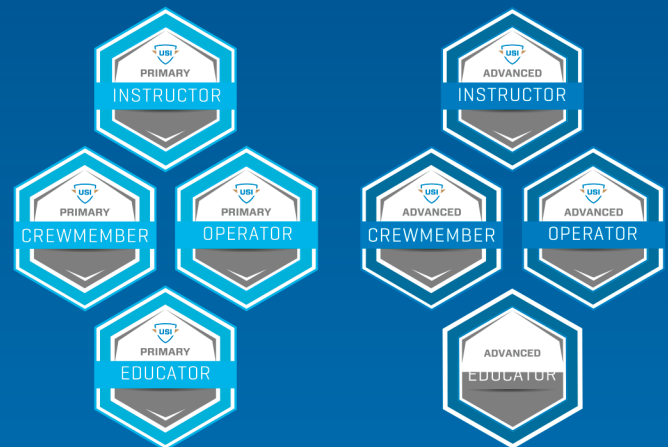

Application Certifications

USI Application Certifications are designed to work in conjunction with USI Industry Certifications. These certifications are specific to the knowledge, demonstrated use, or confirmed experience associated with varying RPAS hardware, software, risk mitigation practices and scenario-based use cases. Consistent with all USI certifications, the required data set for earning Application Certifications require 3rd party verification.

Professional Designations

USI Professional Designations are certifications earned through either verified accrued experience or successful testing in a specific area of RPAS application or expertise. These certifications confirm a high degree of competence, skill or expertise in very specific scenarios applicable to RPAS operations.

Custom Training Programs

USI recognizes that professional RPAS programs have differing and very specific requirements, goals, and objectives. As such, USI works with clients to develop training programs that produce results tailored to their needs. USI offers custom content development, delivered through flexible modalities, and provides 3rd party validation to partner certification standards. These validated USI digital certifications promote the Safe Effective, and Efficient operation of RPAS for your organization.

USI is the leading source for workforce development, remote pilot sourcing, organizational safety solutions, standards based education, training, and professional safety oriented certifications.
